Letter of Recommendation

It's my utmost pleasure to introduce Mr. Ben Bernard, a highly talented individual of our college. The reason I am writing the recommendation for his master's program in Keio University is because he is a person who has accumulated recognition in the field of academics as well as he is a gem in the department of robotics and automation. Knowing him for the last four years, he was a motivation for his juniors and even for some of his seniors, which itself is a remarkable feat. He is a kind of person whose presence Is a necessity when it comes to resolving academic as well as technical issues among his peers.

When he has something that interests him, he reaches to its roots to find the cause and the factors surrounding them which is a good demonstration of his research capabilities. He was one of the persons in our college to receive an award on a robotic project named 'remote robot' making the department feel proud of his accomplishment. This approach has been a motivation to many of his fellow batchmates to demonstrate their skills in the field of robotics, which led to a friendly competition benefitting everyone around him.

His presence was appreciated by the professors in assembling and programming the new robots imported from overseas. He had a helpful and kind nature through which he assisted his fellow batchmates and juniors in improving their projects and papers. He was chosen as the class representative for his dedicated work and he was successful in conducting various events that was assigned to their batch. Furthermore, he was selected to be the IEEE representative of our college.

With this much merits and good demeanor, he will be the pride of your university as well and I am confident in recommending such an individual to your university. If you have any queries regarding him, kindly contact me in my respective e-mail.

Sincerely,

Dr. Katherasan Duraisamy M.E, Ph.D
HEAD OF THE DEPARTMENT
Professor
Department of Robotics and Automation
Dhanalakshmi Srinivasan Engineering College (Autonomous)

Letter of Recommendation

As a Professor in the Department of Robotics and Automation, I have known Mr. Ben Bernard for the last four years. Speaking of him cannot be totally explained in this particular letter, but I will try to highlight him in the best way possible. As an individual in the department, he is the kind of person who cannot go unnoticed, whether it may be his smartness or the helpful nature he involves himself in. He particularly embodies a brilliant mind with a kind soul, knowing him personally I can reassure as many times as I would.

Meeting him in the beginning of the semester was very memorable, the way he introduced himself with confidence and self-esteem which took me in awe of his personality. As the saying "First impression is the best impression" definitely proving true in his case. He topped the charts of the department merit within the first semester proving himself more and more special to our institution. The recognition and the value of our department rose high because of his exemplary contribution in developing robotic projects and performing research. The juniors of the department aspire to develop innovative projects taking his guidance as the utmost priority. He was accepted into the institution with scholarship which he utilized to the fullest and also making a mark of his achievements within the institution.

A project expo named "Young Emerging Talents" was hosted by the respective administration of the institution, where the chief guest was fascinated by his "Remote-Robot" claiming it to be one of the best projects in the whole expo. This motivated his young mind to develop more complex robots focusing on IoT and AI, which he completed in his research. The robots were namely "IoT based Home Automation System" and "Agricultural Robot with Real Time Environmental Analysis". These projects were one of a kind compared to the other students in the department, making his project get selected for further reference for the upcoming batches. The reference model has been an inspiration for the junior students to think innovatively and to produce some extraordinary projects seeing his contributions. He has visited renowned universities such as IIT in completing his journey of robotics, attending seminars and workshop presented by innovative companies of India.

The individual of this calibre should not go unnoticed, and I would very much like your esteemed university to notice his dedication in the field of robotics. He would greatly benefit with this program and I am happy to provide him my fullest support in his journey.

Sincerely,

Dhanalakshmi Srinivasan Engineering College * 621 212 *
